NextBridge Private Limited (June 2018 - current)

Working as a Senior Software Engineer.

Novapex Software Technologies (June 2016 - June 2018)

Worked as PHP Web Developer

PROJECTS

Hessels - An ERP System (Laravel 8 & MySQL & VueJs using Inertia) **Current...**

Currently Working on this project as a backend developer & project lead as well. Modular approach is used by developing different modules (using Laravel package).

System has following modules

- Core Module (registering modules to interact with eachother)
- Inventory Module
- Purchase Module
- Sales Module
- Accounting Module

Studinty App (Laravel 8 & ionic & MySQL)

Worked on this project as a backend developer as well as frontend developer. Implemented backend API's & Admin CMS in Laravel Nova. Some small tasks done on the frontend side.

Studinty App is for those students who want to go abroad for study. They can find other students with future study, future study location, preferred future universities etc. Studinty has other modules like Housing Ads, Marketplace Offer Ads, Event Ads, Chat etc..

- Find profile matches based on profile like future study, future study location, future study institution, future study period, age, gender etc.
- Find housing ads based on future study location and period. Housing Ad is an ad that is offered by students at a future study location. Students can find rooms of specific areas and no of persons.
- Find Marketplace Offers based on future study location. Marketplace Offers are offered by students to sell their products.
- Once a Student finds a match (Profile/Housing/Marketplace), he can contact the owner & can have a chat.
- Timeline where students can post publically and other students can comment & like.

Incontext App (Laravel 7 & ionic & MySQL)

Worked on this project as a backend developer. Implemented backend API's & Admin CMS.

Incontext iis a social app just like facebook where users can add into any group & create posts & comment/like other posts etc..

- Create/Comment/Like Posts/Comments
- Get points for each action
- In-app purchase

Aarvi (Laravel 5.7 & Unity & MySQL)

Worked on this project as a backend developer. Implemented backend API's.

Aarvi is a mobile game that has 3 mini-games. This game has functionality like tinder.com

- Play online with an opponent.
- After the match is finished, users can like, super like, rematch or cancel.
- If both have the same actions as Like then both can private chat

Lango Mobile (Laravel 5.7 & MySQL)

Worked on this project as a team member (developer). Implement various features to application back-end & API. Fix various bugs throughout the application related to features and design.

Lango is a B2B language translation business service provider. You can create your company and start providing translation services. Lango has different modules like web dashboard, Android & IOS Apps. You can add linguists & clients. Arrange meetings between linguistics and clients. You can provide on-call translation services. You can provide video call translation services. You can provide on site translation services.

- Arrange meetings
- Payment management
- Voice & Video calls
- Invites linguists & clients customers
- Billing, Invoices, Audit, Mange and modify activities.
- Linguists & Customers data manage via Import/Export.

RĀZ Mobile (Laravel 5.7 & MySQL)

Worked as frontend and backend developer on feature integration & bug fixing.

With RĀZ Mobile, any cause engaged in fundraising can create a rich mobile presence, share it via social media and other mobile-centric promotional tools, and collect donations from supporters.

- User/Admin panel
- Facebook SDK, Twitter API, Google API for youtube videos, Payment Gateway(PayPal), Twilio SMS Service
- Google Charts

Coogos (Phalcon & MySQL)

Worked as frontend and backend developer on different features mentioned below.

Multilingual Social media site in which user can,

- Post new titles, news.
- Comments on all posts.
- Like/Dislike/Favourite comments and posts.
- Add/Block/Follow other users.
- Send/Read messages of users. (Messaging module)
- Connect with Twitter. (Using Twitter API)
- Search posts, users.
- Share Posts on social sites like Facebook, Twitter and Google plus.
- Login via social sites.
- Revert deleted comments and messages (Trash module)
- View its/other profile where the user can see its/other follower posts, comments and categories where he/other posts and also can see charts where he can see the post of today, yesterday and last month.

Other features

- Settings module.
- Custom comment area, where user can choose many option to style a post or make links in post.
- Upload profile banner. (resizing and cropping)
- Sensor words filter (we applied a sensor word filter user can't post these words)

Valeroo (Laravel 5.5 & MySQL)

Worked as frontend and backend developer on different features mentioned below.

Valeroo connects suppliers and buyers (currently in the industry) to each other.

- Multilingual
- Buyer/Company Register.
- Google Drive integration.
- Cron Jobs.
- Memcache.
- Events.
- Video integration.

- Google slides integration.
- Chat
- Profile
- Schedulers
- Promotion Feature
